WORK EXPERIENCE

Tenex.ai **Mar 2026 - Jul 2026**
AI Engineer Intern Santa Clara, CA, USA

- Built a **multi-agent AI harness** processing 3K+ security alerts daily, reducing manual analysis effort by 60% through **Temporal-orchestrated** agents for API-based enrichment, threat classification, and high-risk escalation.
- Redesigned the **integration architecture** using a reusable Go SDK, decoupling third-party integrations from the core platform, and cutting integration-related code by 10%.
- Developed **evaluation and tracing pipelines** to assess multi-agent performance, measuring classification accuracy, tool-call failures, execution latency, and token usage across security investigations.
- Built a **data enrichment pipeline**, reducing false negatives by 10% by providing agents with additional triage context while lowering dependency on Chronicle SOAR.

Fortinet **May 2022 - Jun 2024**
Software Engineer Remote

- Designed an **agentic system** that automatically generated FortiSOAR playbooks from user prompts, reducing development effort by **50%**, using dynamically orchestrated LLM workers, tool calling, and LoRA fine-tuning on existing playbook JSON for schema compliance.
- **Led 3 interns** in building a multi-tenant SOC visibility dashboard using Angular, Java, and consolidated APIs to unify security data across configurable investigation widgets.
- Optimized large-scale system performance by tuning **Elasticsearch and SQL query logic** for universal search, decreasing record retrieval latency by 30% across millions of records.
- Maintained and enhanced Java Spring Boot microservices, including API Gateway and Notifier, implementing secure request routing, notification workflows, and service-to-service communication.

TwinNov Technologies **Jan 2020 - Jun 2021**
Software Engineer Intern Remote

- Developed an accelerometer data visualization dashboard using Python and Chart.js to identify mechanical failure points, contributing to a 30% reduction in vibrations.

PROJECTS & OPEN SOURCE

Job Finder Platform Application Live | jobs.ypatodkar.com

- Built and launched a job discovery platform serving 60+ users with **1,500+ job clicks.**
- Integrated Jev, a decision-focused AI model, for job relevance scoring and ranking, lowering LLM API costs by ~50× compared to the previous approach.

Open Source - Zed Text Editor | Rust

- Merged PR: Implemented multi-file selection in Zed's file picker, for users to select and open multiple files simultaneously.
- Merged PR: Fixed duplicate file mentions in Zed's AI Agent Panel to prevent unnecessary absolute-path expansion.

EDUCATION

Master of Science in Computer Science **Sep 2024 - Jun 2026**
Santa Clara University Santa Clara, CA, USA

Post-Graduation Diploma in Advanced Computing **Sep 2021 - May 2022**
CDAC ACTS Pune, India

Bachelor of Technology **Aug 2017 - May 2021**
Vishwakarma Institute of Technology Pune, India

TECHNICAL SKILLS

- Languages: Python, Go, Java, TypeScript, JavaScript, SQL, C++, C#
- AI & Agentic Systems: LLMs, Agentic AI, Multi-Agent Systems, Tool Calling, RAG, LoRA/Fine-Tuning, PyTorch
- Backend & Data: Flask, Spring Boot, NestJS, REST APIs, Microservices, Kafka, Redis, Elasticsearch, PostgreSQL, MongoDB
- Cloud & Systems: AWS, Kubernetes, Docker, CI/CD, Jenkins, Grafana, Git, Linux, Distributed Systems, System Design

ACHIEVEMENTS AND PUBLICATIONS

- Won 3 hackathons, including hack for humanity organized by SCU, and 2 creators corner.
- 99.2 percentile (Rank 151/20,000+) in national CDAC PG-DAC entrance exam.
- Authored a research paper on Inter-Satellite communication in Satellite Communications, under the guidance of Dr. Moataghed.
